

## DAILY CLEANING

Clean the resin product with a soft cloth or sponge, using water and a mild soap. Rinse thoroughly with plenty of water and dry if necessary. Drying is especially recommended in areas with hard water. Avoid abrasive scourers and products containing solvents.

## LIMESCALE

As with shower screens and taps, limescale may build up on the surface when the water has a high lime content. We recommend cleaning the product regularly with an anti-limescale product suitable for bathroom surfaces or with industrial-grade cleaning vinegar. Spray onto the affected area, leave to act for up to 30 minutes, then clean with a soft cloth or sponge and rinse thoroughly with plenty of water. Repeat the process if necessary.

## SCRATCHES

For all colours except Natural White, you can order a Quare repair minikit. For Quare products in Natural White, where no coating is applied, abrasive scourers may be used.

## DO NOT USE

abrasive scouring pads (Scotch-Brite type) on coated resin products, as they may damage the surface.
